Electric Fencing Products

More protection with dual detection

Give a boost to your existing electric fence with Nemtek's patented dual action tension sensors (DATS)

In the past, fence alarms were only triggered if the electric fence detected the cutting or the shorting of a fence wire. But intruders are getting smarter, and sometimes they manage to separate wires without setting off the system.

Not anymore.

Nemtek has added another layer of security for your fence with an affordable solution that can be retrofitted to most electric fences to prevent intruders from pushing down on your fence or attempting to separate the wires.

Features:

- Detects lifting, pressing or forcing of the fence wires.
- Has a dual detection system to ensure that an alarm is triggered and that reduces tampering.
- Is easy to install and can be fitted to most Nemtek electric fences.
- Is available in two sizes, DATS2 for wall-top fencing and DATS3 for the heavier gauge wires used in free-standing fencing.
- Is robust and long-lasting.

Speak to your electric fencing installer about fitting a DATS onto your system to give you that extra protection and peace of mind only Nemtek can offer you.
